Industrial Packaging and Custom Packaging Solutions

Our systems are fully automated and allow us to produce more than 300 million packs each year. We are fast and flexible when it comes to manufacturing and delivering your packaging.

standards

We advise our customers throughout the packaging process so that we can design a product that suits them.

Applications:

- Automotive industry (CKS, gearboxes, bumpers, front ends, wiring, spare parts, steering systems, braking systems, suspension systems, engines, etc.)
- Energy sector (photovoltaic panels, electrical cabinets, components, etc.)
- Electrical sector (wiring, electromedical equipment, circuits, transformers, generators, etc.)
- Telecommunications (cabinets, mobile phones, base stations, transmission products, UPS systems, etc.)

CL CONT-PERF Model

The CL CONT-PERF model comprises a folding central body, a lid and a pallet. The latter two elements slot into the central body, making it highly resistant and adaptable.

This wood packaging is intended for exports and transportation and is made from plywood board and steel. It is stackable and designed to protect merchandise during the transport process.

LG CONT-PERF Model

Standard measures

1	580x380x380	5	780x580x580
2	780x380x380	6	980x580x580
3	780x580x380	7	1180x780x580
4	780x380x580	8	1180x780x780
		9	1180x980x780

The LG CONT-PERF model is made up of a folding central body, a lid and a mounted base. The three parts are assembled using metal tabs.

This model is perfect for merchandise that needs to be tightly secured and for types of transport that require extra security.

FL CONT-PERF Model

The FL CONT-PERF model comprises a large folding central body, a lid and a mounted base.

This model can be easily reused. It is very simple to assemble and dismantle as the body can be folded inside the lid and base.

PLG CONT-PERF Model

The PLG CONT-PERF model is designed for packing large goods. It comprises six pieces that are easily assembled using metal tabs.

This model is ideal for sea transport, offering a good return on investment and streamlined logistics.

Applications:

- Packing lightweight and medium-weight materials.
- Superior protection for logistics and courier shipments.
- Refrigerated transport.
- Storage units.
- Compatible with Inka, ratioPal and Euro pallets.

CARDBOARD

Traditional

We offer industrial cardboard packaging for the automotive industry that meets the specifications of the main original equipment manufacturers (OEM).

Our extensive product range includes customised models to suit each customer.

We use the latest manufacturing technology to

fulfil our orders to a tight deadline to meet our customers' needs.

Cardboard packaging is an excellent option for storing goods in a warehouse and keeping them in perfect condition. It is also recommended for transporting delicate goods due to its hard-wearing, robust nature.

Box pallet for industrial transport

Box pallets are specially designed for transporting large merchandise around the world and are made from corrugated cardboard.

This large industrial packaging solution is made entirely from corrugated cardboard and is 100% recyclable.

Box pallets with custom interiors:

In all our box pallets, the interior can be adapted to fit the products being transported.

Box pallets are very stable and safe when stacked. They are delivered folded and are easy to assemble and dismantle.

Heavy Duty

Heavy-duty cardboard packaging for transporting merchandise is resistant and able to withstand tougher conditions, easy to incorporate into the logistics chain and environmentally friendly.

Our heavy-duty packaging is custom designed and manufactured from corrugated cardboard in different thicknesses (single, double,

triple and quadruple). The exterior can be personalised to suit the customer's needs.

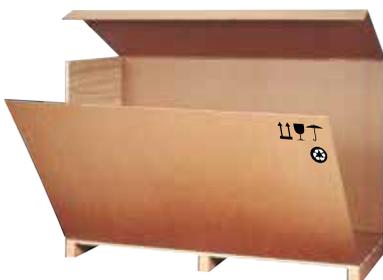

This type of packaging allows you to take full advantage of the space inside and the mode of transport used to carry as much merchandise as possible in optimum conditions.

Applications:

- Automotive industry (CKS, gearboxes, bumpers, front ends, wiring, spare parts, steering systems, braking systems, suspension systems, engines, etc.)

MIXED

0709 Model

This type of packaging is specially designed for medium to large products, as it is highly resistant and secure.

Our mixed packaging made from cardboard and wood is completely customisable to facilitate transport and logistics for very long, solid or heavy industrial products.

Offering maximum protection and minimum bulk, the 0709 model is well-balanced.

This packaging is fully stackable, allowing large quantities of products to be transported and saving time and costs on assembly and logistics.

0501P Model

The 0501P mixed packaging is one of the best designed, most practical solutions on the market.

These mixed industrial boxes made from cardboard and wood are fully recyclable and are available in double and triple-wall cardboard in different qualities.

One of the advantages of this mixed packaging is

that it saves space during transport and storage. No special tools are needed to assemble the packaging and anyone can do it without difficulty.

Embalajes Echeberria S.L. offers a fully customised service and locks, hinges, wheels and other accessories can be added to our products according to customers' needs.

MACHINING

Applications:

- Special cradles
- Fastenings
- Corners
- Packaging for bottles
- Boxes
- Hollow bricks
- Cornices
- Panels

Custom-designed

We design and manufacture mechanical packaging elements using CAD/CAM.

Our mechanical packaging solutions made from

wood are custom-designed and are used to protect and maintain products throughout their life cycle.

By mechanising the packaging, the aim is to ensure that it fits the product perfectly. It also allows us to offer custom-made solutions.

Mechanical packaging is used to protect and maintain products throughout their life cycle.

This type of packing uses technology to offer an extra level of protection that other packaging is unable to provide.

Embalajes Echeberria S.L. delivers a professional, rigorous service and specialises in manufacturing

mechanical packaging solutions using digital control systems to guarantee high quality standards.

ACCESSORIES

Protectors

If your products need to be wrapped to protect them and absorb impacts, as well as to prevent them from accumulating dust and dirt during the transport process, we offer cardboard rolls and bubble wrap.

Products are also available to fill the space between the product and the box to protect it from impacts. At Embalajes Echeberria S.L., we use products such as eco-friendly packaging filler, Airmove compressed air bags or air cushion sleeves for smaller products.

Our protectors are 100% eco-friendly

Types of protectors:

- Rolls of bubble wrap in different widths
- Rolls of bubble wrap + Kraft paper
- Rolls of bubble wrap + foam
- Rolls of foam in different thicknesses
- Rolls of corrugated cardboard in different widths
- Polypropylene and PVC seals
- Manual and automatic stretch film
- Tar paper, Kraft paper, silk and hemp twine

Wooden frames

Embalajes Echeberria S.L. offers wooden frames for packaging, which are among the most highly demanded modular solutions in the world. They take up very little space because their 4 or 6 stainless steel hinges make them fully collapsible.

Our wooden frames comply with standard measurements, are very flexible and offer all the benefits of modern packaging. Both the rings and the lids can be easily replaced if they are damaged and Embalajes Echeberria S.L. offers an after-sales service supplying spare parts.

The frames are also highly resistant with an ergonomic design.

Standard measures

1	800x600x200
2	1200x800x200
3	1200x1000x200

We comply with phytosanitary standards for international exports

Handles and reinforcements

Handles and reinforcements facilitate transportation, making it much safer, more comfortable and more reliable. They also help to maintain the product in position in its box.

At Embalajes Echeberria S.L., we offer handles with and without reinforcements that are suitable for any perforated packaging, with a set of grips for passing the strap through.

Protective profiles and corners

At Embalajes Echeberria S.L., we take great care to provide additional protection for your

products to avoid bumps or friction while they are being transported and distributed.

Technical

Technical packaging is designed for use in transporting and handling products that are particularly fragile or have specific characteristics. This may be medical and sanitary equipment, rescue equipment, special telecommunications equipment, audiovisual equipment, etc.

This packaging is made to measure on our premises. Due to the special requirements of this type of packaging, the interior may be made from foam or soft plastic so that it adapts to the products being transported and prevents them from sliding around inside the packaging.

Dangerous goods

This packaging is specially designed to guarantee the safe transport of hazardous materials such as toxic gases, corrosive substances or flammable liquids.

It must be certified and clearly labelled in compliance with the relevant legislation.

Special cardboard

Special cardboard packaging is made to measure according to the specifications of the product to be transported.

This packaging is reinforced at critical points to offer extra protection, guaranteeing that the product can be safely loaded, transported and

unloaded.

Special cardboard packaging is in very high demand as it uses lightweight, inexpensive cardboard and is ideal for transporting and handling items such as car parts.

Special custom-made wood

Custom-made wood packaging is used for special formats.

Our wood packaging is treated so that it complies with the ISPM 15 international phytosanitary standard if it is to be transported internationally.

The boxes are stamped to certify that this treatment has been applied.

Our special wood packaging is made at our factory in Vitoria and protects your products while they are being transported and handled.

Special plastic

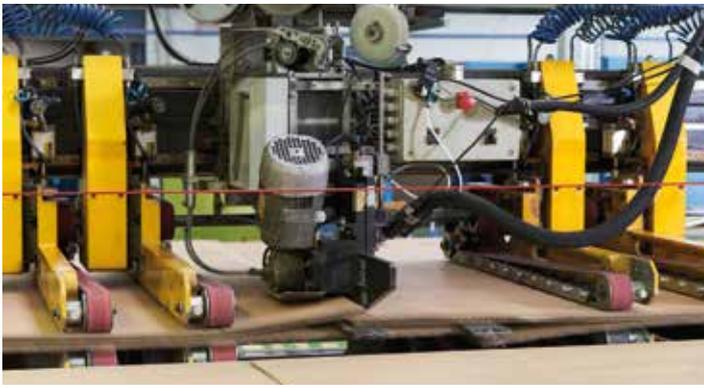

We offer plastic containers with optional interior fittings in a variety of materials. These recyclable containers are made to fit each product.

Our industrial plastic containers are collapsible and feature interior fittings tailored to the characteristics of the product (cushioning foam, flexible dividers, plastic positioners, etc.).

Interior fittings:

- Flexible dividers
- Rigid dividers
- Foam interiors
- Conductive interiors
